

Online supplement to

“New Matrix-Based Methods for the Analytic Evaluation of the Multivariate Cumulative Normal Distribution Function”

By Chandra R. Bhat

Performances in each of four sets of cases corresponding to (a) low correlations, high MVNCD values, (b) low correlations, low MVNCD values, (c) high correlations, high MVNCD values, and (d) high correlations, low MVNCD values.

Table 1. MVNCD evaluations results: low correlation, high MVNCD value
