## 1. Problem 1

a. North American Datum of 1983
b. Albers Equal Area Conic
c. USA Contiguous Albers Equal Area Conic:

Note: Maps displayed using Web Mercator view are also acceptable.
USA Contiguous Albers Equal Area Conic Prepared by Paul Ruess, September 26, 2016

North American Albers Equal Area Conic:
North American Albers Equal Area Conic Prepared by Paul Ruess, September 26, 2016

## d. Manual Calculation

i. South of the Latitude of Origin:
$\Delta L_{\text {lat }}=R_{e} \Delta \emptyset=6371.0 \mathrm{~km} *\left(37.5^{\circ}-30.2861^{\circ}\right) *\left(\frac{\pi}{180^{\circ}}\right)=802.149 \mathrm{~km}$
ii. West of the Central Meridian:
$\Delta L_{\text {lon }}=R_{e} \Delta \lambda \cos \emptyset=6371.0 \mathrm{~km} *\left(97.7394^{\circ}-96^{\circ}\right) *\left(\frac{\pi}{180^{\circ}}\right) * \cos \left(30.2861^{\circ} * \frac{\pi}{180}\right)=167.015 \mathrm{~km}$
e. UT Austin Point Feature

Projecting the UT Austin coordinates onto the NAD '83 Albers yields the following offset:
Latitudinal difference: 167062-167015 $=\sim 50$ meters
Longitudinal difference: 804122 - $802149=\sim \sim_{2} 200$ meters
This difference results from the assumption of a perfectly spherical Earth when completing the calculations by hand.
f.

North American Albers Equal Area Conic Projection

| OBJECTID_1 | Shape | HUC_8 | Shape_Length | Shape_Area |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Polygon 12100203 | 450392.442679 | 3519932197.027825 |  |

USA Contiguous Albers Equal Area Conic Projection

| OBJECTID_1 | Shape | HUC_8 | Shape_Length | Shape_Area |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Polygon 12100203 | 451421.887569 | 3519932197.74058 |  |

The basin's shape lengths and shape areas vary slightly in both projections. Differences to the length area greater due to area being preserved while length is not.

## 2. Manual Calculation

a. UT Austin Latitude:

$$
\begin{gathered}
\Delta L_{l a t}=R_{e} \Delta \emptyset \\
1 \mathrm{~km}=6371 \mathrm{~km} * \Delta \emptyset *\left(\frac{\pi}{180^{\circ}}\right) \\
\Delta \emptyset=\frac{1 \mathrm{~km}}{6371 \mathrm{~km} *\left(\frac{\pi}{180^{\circ}}\right)}=0.00899^{\circ}
\end{gathered}
$$

b. UT Austin Longitude:

$$
\begin{gathered}
\Delta L_{l o n}=R_{e} \Delta \lambda \cos \emptyset \\
1 \mathrm{~km}=6371 * \Delta \lambda * \cos \left(30.2861^{\circ} * \frac{\pi}{180}\right) \\
\Delta \lambda=\frac{1 \mathrm{~km}}{6371 \mathrm{~km} *\left(\frac{\pi}{180^{\circ}}\right) * \cos \left(30.2861^{\circ} * \frac{\pi}{180}\right)}=0.01041^{\circ}
\end{gathered}
$$

c. Logan, Utah Latitude:

Note: This is the same for UT Austin and all other locations, because the latitudinal distance depends only on the earth's radius and the distance (in this case 1 km ).

$$
\begin{gathered}
\Delta L_{\text {lat }}=R_{e} \Delta \emptyset \\
1 \mathrm{~km}=6371 \mathrm{~km} * \Delta \emptyset *\left(\frac{\pi}{180^{\circ}}\right) \\
\Delta \emptyset=\frac{1 \mathrm{~km}}{6371 \mathrm{~km} *\left(\frac{\pi}{180^{\circ}}\right)}=0.00899^{\circ}
\end{gathered}
$$

d. Logan, Utah Longitude:

$$
\begin{gathered}
\Delta L_{l o n}=R_{e} \Delta \lambda \cos \emptyset \\
1 \mathrm{~km}=6371 * \Delta \lambda * \cos \left(41.7483^{\circ} * \frac{\pi}{180}\right) \\
\Delta \lambda=\frac{1 \mathrm{~km}}{6371 \mathrm{~km} *\left(\frac{\pi}{180^{\circ}}\right) * \cos \left(41.7483^{\circ} * \frac{\pi}{180}\right)}=0.01205^{\circ}
\end{gathered}
$$
